1756 ControlLogix Controllers

The ControlLogix® controller provides a scalable controller solution that is capable of addressing a large amount of I/O points. The ControlLogix controller can be placed into any slot of a ControlLogix I/O chassis and multiple controllers can be installed in the same chassis.

ControlLogix controllers can monitor and control I/O across the ControlLogix backplane, as well as over network links. To provide communication for a ControlLogix controller, install the appropriate communication interface module into the chassis.

1756-L7x ControlLogix Controllers Features and Specifications

Feature	1756-L71, 1756-L72, 1756-L73, L73XT, 1756-L74, 1756-L75
Controller tasks	<ul style="list-style-type: none"> • 32 tasks • 100 programs/task • Event tasks: all event triggers
Built-in communication ports	1 port USB ⁽¹⁾
Communication options	<ul style="list-style-type: none"> • EtherNet/IP • ControlNet • DeviceNet • Data Highway Plus™ • Remote I/O • SynchLink™ • Third-party process and device networks
USB port communication	Programming, configuration, firmware flash and on-line edits only
Controller connections supported, max	500
Network connections, per network module	<ul style="list-style-type: none"> • 100 ControlNet (1756-CN2/A) • 40 ControlNet (1756-CNB/D, 1756-CNB/E) • 128 ControlNet (1756-CN2/B) • 256 EtherNet/IP; 128 TCP (1756-EN2x) • 128 EtherNet/IP; 64 TCP (1756-ENBT)
Controller redundancy	Full support
Integrated motion	<ul style="list-style-type: none"> • SERCOS interface • Analog options (encoder input, LDT input, SSI input) • EtherNet/IP (CIP Motion)
Programming languages	<ul style="list-style-type: none"> • Relay ladder • Structured text • Function block • SFC

(1) The USB port is intended for temporary local programming purposes only and not intended for permanent connection. Do not use the USB port in hazardous locations.

Table 1 - Technical Specifications - 1756-L7x ControlLogix Controllers

Attribute	1756-L71	1756-L72	1756-L73	1756-L74	1756-L75
User memory	2 MB	4 MB	8 MB	16 MB	32 MB

1756 ControlLogix-XT Controllers

The ControlLogix-XT™ controllers function in the same way as the traditional ControlLogix controllers. The ControlLogix-XT products include control and communication system components that are conformally coated for extended protection in harsh, corrosive environments:

- When used with FLEX I/O-XT™ products, the ControlLogix-XT system can withstand temperature ranges from -20...70 °C (-4...158 °F).
- When used independently, the ControlLogix-XT system can withstand temperature ranges from -25...70 °C (-13...158 °F).
- Equipment designated as 'LXT' is certified for use only within a surrounding air temperature of -25...60 °C (-13...140 °F) even when used with other 'XT' equipment.

1756-L73XT ControlLogix Controller Specifications

Table 8 - Technical Specifications - 1756-L73XT ControlLogix Controller

Attribute	1756-L73XT
User memory	8 MB
I/O memory	0.98 MB
Optional nonvolatile memory	1 GB (1784-SD1 ships with every controller) 2 GB (1784-SD)
Digital I/O, max	128,000
Analog I/O, max	4000
Total I/O, max	128,000
Replacement battery	—

1756 GuardLogix Controllers

A GuardLogix® controller is a ControlLogix controller that also provides safety control. The GuardLogix system is a dual controller solution—you must use a 1756-L6xS/1756-L7xS primary controller and a 1756-LSP/1756-L7SP safety partner to achieve up to SIL CL 3/PLe/Cat. 4. A major benefit of this system is that it's still a single project, safety and standard together. The safety partner controller is a part of the system, is automatically configured, and requires no user setup.

During development, safety and standard have the same rules; multiple programmers, online editing, and forcing are all allowed. Once the project is tested and ready for final validation, you set the safety task to a SIL 3 integrity level, which is then enforced by the GuardLogix controller. When safety memory is locked and protected, the safety logic can't be modified and all safety functions operate with SIL 3 CL integrity. On the standard side of the GuardLogix controller, all functions operate like a regular Logix controller. Thus, online editing, forcing, and other activities are all allowed.

With this level of integration, safety memory can be read by standard logic and external devices, like HMIs or other controllers, eliminating the need to condition safety memory for use elsewhere. The result is easy system-wide integration and the ability to display safety status on displays or marquees. Use Guard I/O™ modules for field device connectivity on Ethernet or DeviceNet networks, and for safety interlocking between GuardLogix controllers use Ethernet or ControlNet networks. Multiple GuardLogix controllers can share safety data for zone to zone interlocking, or a single GuardLogix controller can use remote distributed safety I/O between different cells/areas.

In addition to the standard features of a ControlLogix controller, the GuardLogix controller has these safety-related features.

1756 GuardLogix-XT Controllers

The GuardLogix-XT controllers function the same way as the traditional GuardLogix controllers. The GuardLogix-XT controllers are conformally coated for extended protection in harsh, corrosive environments. The GuardLogix-XT system can withstand temperature ranges from -25...70 °C (-13...158 °F). You must use a 1756-L73SXT primary controller with a 1756-L7SPXT safety partner.

Equipment designated as LXT is certified for use only within a surrounding air temperature of -25...60 °C (-13...140 °F) even when used with other XT equipment.

Attribute	1756-L73SXT	1756-L7SPXT
User memory	8 MB	—

1756 Armor GuardLogix Controller

The Armor™ GuardLogix® controller extends the ControlLogix platform to the On-Machine™ space, putting industrial control closer to the application and sometimes onto the machine itself. This safety controller provides 4 MB of memory and two independent Ethernet ports to connect to an EtherNet/IP network.

This safety controller supports the full temperature range as ControlLogix controllers, while offering global certifications and ratings for IP67 dust and washdown protection. It is certified for use in safety applications up to and including Safety Integrity Level (SIL) 3 and Performance Level (e) in which the de-energized state is the safe state.

With so many hardware functions in a single device, the Armor GuardLogix controller minimizes cabinet hardware, simplifies wiring layouts, does not require tools or specialty personnel for component replacement, improves Mean Time to Repair (MTTR), simplifies troubleshooting, and makes system status readily available without the need to open a cabinet or visit a control room.

The Armor GuardLogix controller provides memory capacity for the most demanding applications and provides resiliency from loss of one network connection and allowing replacement of devices without stopping production. Similar to the 1756-L72S GuardLogix controller, this controller offers the standard features of a ControlLogix controller and safety features.

Table 23 - Features - Armor GuardLogix Controller

Feature	1756-L72EROMS
Safety communication options	Standard and safety on EtherNet/IP networks
Network connections,	256 EtherNet/IP; 128 TCP
Controller redundancy	Not supported
Programming languages	Relay ladder with safety application instructions

1756-L72EROMS GuardLogix Controller Specifications

Table 24 - Technical Specifications - 1756-L72EROMS Armor GuardLogix Controller

Attribute	1756-L72EROMS
User memory	4 MB
Safety memory	2 MB
I/O memory	0.98 MB
Optional nonvolatile memory storage	1 GB (1756-SD1 ships with every controller) 2 GB (1756-SD2)
Digital I/O, max	128,000
Analog I/O, max	4000
Total I/O, max	128,000
Input voltage range	18...32V DC
Input voltage, nom	24V DC
Input system power, pins 2 and 3	18...32V DC @ 8 A
Input pass through power, pins 1 and 4	
Output external power, pins 2 and 3	18...32V DC @ 6 A
Output pass through power, pins 1 and 4	18...32V DC @ 8 A
Fusing	Non-replaceable fuse is soldered in place ⁽³⁾
Isolation voltage	30V (continuous), Basic Insulation Type, Power to enclosure, Ethernet channels to Power, and non-redundant EtherNet channels to non-redundant EtherNet channels. No isolation between redundant Ethernet channels Type tested at 707V DC for 60 s
Weight, approx	6.5 kg (14.3 lb)
Dimensions	240.0 x 292.0 x 164.52 mm (9.4 x 11.5 x 6.5 in.)
Ethernet port	1 Ethernet RJ45 Category 5
Ethernet cable	802.3 compliant shielded or unshielded twisted pair
USB port ⁽¹⁾	USB 1.1, full speed (12 Mbps)
Wire category ⁽²⁾	2 - on power ports 2 - on Ethernet ports
Enclosure type rating	Meets IP67 and Nema Type 1

(1) The USB port is intended for temporary local programming purposes only and not intended for permanent connection.

(2) Use this Conductor Category information for planning conductor routing. Refer to Industrial Wiring and Grounding Guidelines, publication [1770-4.1](#).

(3) This fuse is intended to guard against fire hazard due to short circuit conditions.

Table 25 - Environmental Specifications - 1756-L72EROMS Armor GuardLogix Controller

Table 26 - Certifications - 1756-L72EROMS Armor GuardLogix Controller

Certification ⁽¹⁾	1756-L72EROMS
c-UL-us	UL Listed Industrial Control Equipment, certified for US and Canada. See UL File E65584.
CE	European Union 2004/108/EC EMC Directive, compliant with: <ul style="list-style-type: none"> EN 61326-1; Meas./Control/Lab., Industrial Requirements EN 61000-6-2; Industrial Immunity EN 61000-6-4; Industrial Emissions EN 61131-2; Programmable Controllers (Clause 8, Zone A & B) European Union 2006/42/EC MD, compliant with: <ul style="list-style-type: none"> EN 60204-1; Electrical equipment of machines EN ISO 13849-1; Safety-related parts of control systems EN 62061; Functional safety of safety-related control systems
RCM	Australian Radiocommunications Act, compliant with: <ul style="list-style-type: none"> EN 61000-6-4; Industrial Emissions
KC	Korean Registration of Broadcasting and Communications Equipment, compliant with: <ul style="list-style-type: none"> Article 58-2 of Radio Waves Act, Clause 3
TÜV certified for functional safety ⁽²⁾	Capable of Cat. 4/PL e according to EN ISO 13849-1 and SIL 3 according to EN 62061/IEC 61508 when used as described in the GuardLogix Controller Systems Safety Reference Manual, publication 1756-RM099 .

(1) When marked. See the Product Certification link at <http://www.ab.com> for Declarations of Conformity, Certificates, and other certification details.

(2) When used with specified firmware revisions.

Controller Memory Use

The following equations provide a rough memory estimate.

Controller tasks	_____ x 4000	=	_____ bytes (minimum 1 task)
Digital I/O points	_____ x 400	=	_____ bytes
Analog I/O points	_____ x 2600	=	_____ bytes
DeviceNet modules ⁽¹⁾	_____ x 7400	=	_____ bytes
Other communication modules ⁽²⁾	_____ x 2000	=	_____ bytes
Motion axis	_____ x 8000	=	_____ bytes
FactoryTalk® alarm instruction	_____ x 1000	=	_____ bytes (per alarm)
FactoryTalk subscriber	_____ x 10,000	=	_____ bytes

(1) The first DeviceNet module is 7400 bytes. Additional DeviceNet modules are 5800 bytes each.

(2) Count all the communication modules in the system, not just those in the local chassis. This includes device connection modules, adapter modules, and ports on PanelView™ terminals.

For redundant controller systems, double the memory estimate you calculate. For example, if you estimate you need 2 MB of memory, select a controller with 4 MB of memory.

Reserve 20...30% of the controller memory to accommodate growth.

Controller Compatibility

The following tables provide compatibility with I/O modules, display devices, and other controllers and communication devices.

Control Distributed I/O Modules

The controller can control these distributed I/O modules via the I/O Configuration tree in the programming software.

Table 27 - Distributed I/O Modules

I/O Modules	EtherNet/IP	ControlNet	DeviceNet	Remote I/O
Chassis-based I/O

1775 PLC-3®	No	No	No	Yes	Yes	No
5250 PLC-5/250	No	No	No	Yes	Yes	No

(1) The Ethernet PLC-5 controller must be series C, firmware revision N.1 or later; series D, firmware revision E.1 or later; or series E, firmware revision D.1 or later.

(2) The 1785-ENET Ethernet communication interface module must be series A, firmware revision D or later.

(3) The PLC-5, SLC, and MicroLogix processors appear as I/O points to the Logix controller. Use the appropriate DeviceNet interface for the controller.

(4) Use a 1747-L55x controller with OS501 or later.

(5) The 1756-DH485 module supports full DH-485 functionality.

Communicate with Other Communication Devices

The controller can communicate with these communication devices.

Communication Device	EtherNet/IP	ControlNet	DeviceNet	DH+
Linking device (ControlLogix controllers only)	1788-EN2DN	1788-CN2DN 1788-CN2FF	1788-EN2DN 1788-CN2DN	—
PCMCIA card	—	1784-PCC	1784-PCD	1784-PCMK
PCI card	—	1784-PCIC 1784-PCICS	1784-PCID 1784-PCIDS 1784-CPCIDS	—
Drives SCANport™ module ⁽¹⁾	—	1203-FM1 1203-FB1	—	—
Communication module ⁽²⁾	—	1203-CN 1770-KFC15 1770-KFCD15 1747-KFC15	1770-KFD 1770-KFG	1770-KF2
Communication card	—	1784-PKTCS 1784-KTCS 1784-KTCX15	1784-PKTX 1784-PKTXD	—
USB communication device	—	1784-U2CN	1784-U2DN	1784-U2DHP

(1) Use a CIP generic MSG instruction to communicate with the 1203-FM1 SCANport module on a DIN rail that is remote to the controller. The remote DIN rail also requires a 1794-ACN15 or 1794-ACNR15 ControlNet adapter module.

(2) Use the generic module configuration to configure the 1203-CN1 module and a CIP generic MSG instruction to communicate with the module.

ControlLogix Redundancy

The ControlLogix controller supports controller redundancy. In a redundant controller system, you need these components:

- Two 1756 chassis, each with the same of the following:
 - Number of slots
 - Compatible modules in the same slots
 - Redundancy firmware revisions in each module
 - Two additional ControlNet nodes outside the redundant chassis pair if the application uses ControlNet networks
- One 1756-RM, 1756-RM2, 1756-RMXT, or 1756-RM2XT redundancy module per chassis that is connected by a 1756-RMC x cable (the 1756-RM2 redundancy modules cannot be paired with the 1756-RM redundancy modules)
- Up to two 1756-L6 x or 1756-L7 x controllers, or a combination of the two, in each chassis
- Up to seven enhanced or standard (not mixed) communication modules, that is, 1756-CN2/B, 1756-CN2R/B, 1756-CN2RXT modules 1756-EN2T, 1756-EN2TR, or 1756-EN2TXT modules

Table 28 - Technical Specifications - 1756 Redundancy Modules

Attribute	1756-RM	1756-RM2	1756-RMXT	1756-RM2XT

ControlLogix Connections

A ControlLogix system uses connections to establish communication links between devices. The types of connections include the following:

- Controller-to-local I/O modules or local communication modules
- Controller-to-remote I/O or remote communication modules
- Controller-to-remote I/O (rack-optimized) modules
- Produced and consumed tags
- Messages
- Access via the controller programming software
- Access via RSLinx® software for HMI or other applications

You indirectly determine the number of connections the controller uses by configuring the controller to communicate with other devices in the system. The limit of connections may ultimately reside in the communication module you use for the connection. If a message path routes through a communication module, the connection related to the message also counts towards the connection limit of that communication module.

The 1756-L6x and 1756-L6xS controllers support 250 connections; the 1756-L7x and 1756-L7xS controllers support 500. To calculate the total connections for a controller, consider the connections to local I/O modules and the connections to remote modules. Use this table to figure local connections.

Table 31 - Figure Local Connections

Connection Type	Device Quantity	Connections per Device	Total Connections
Local I/O module (always a direct connection)		1	
1756-M16SE, 1756-M08SE, 1756-M03SE SERCOS motion module 1756-M02AE, 1756-M02AS, 1756-HYD02 analog motion module		3	
1756-CN2, 1756-CN2R communication module 1756-CNB, 1756-CNBR communication module 1756-CN2RXT communication module		0	
1756-EN2F, 1756-EN2T communication module 1756-ENBT, 1756-EWEB communication module 1756-EN2TXT communication module		0	
1756-DNB communication module		2	
1756-DHRIO communication module 1756-RIO communication module 1756-DHRIOXT communication module		1	
1756-DH485 communication module		1	
Total			

Regardless of how you configure local I/O modules (rack-optimized or direct connect), the controller establishes a direct connection for each local I/O module. Remote connections depend on the communication module. The number of connections the module supports determines how many connections the controller can access through that module. Use this table to figure remote connections for the controller.

Table 32 - Figure Remote Connections

Connection Type	Device Quantity	Connections per Device	Total Connections
Remote ControlNet communication module			
Configured as a direct connection		0	
Configured as a rack-optimized connection		1	
Remote I/O module over a ControlNet network (direct connection)		1	
Remote Ethernet communication module			
Configured as a direct connection		0	
Configured as a rack-optimized connection		1	
Remote I/O module over an EtherNet/IP network (direct connection)		1	
Remote device over a DeviceNet network (accounted for in rack-optimized connection for local 1756-DNB module)		0	
Other remote communication adapter		1	
Safety input module		1	
Safety output module		2	
Produced tag		1	
Each consumer		1	
Consumed tag		1	
Connected message		1	
Block-transfer message		1	
Total			

ControlLogix Controller Accessories

You can use the following accessories with ControlLogix controllers.

Memory Cards

Memory cards offer nonvolatile memory to permanently store a user program and tag data on a controller. The 1756-L7x ControlLogix controller comes with the 1784-SD1 Secure Digital (SD) card already installed in every controller. The 1756-L6x controllers support optional CompactFlash cards purchased separately. The memory cards are installed in a socket on the controller. Through the programming software, you can manually trigger the controller to save to, or load from, nonvolatile memory or configure the controller to load from nonvolatile memory on powerup.

Table 33 - Technical Specifications - 1784 Memory Cards

Attribute	1784-CF128	1784-SD1	1784-SD2
Memory	128 MB	1 GB	2 GB
Supported controllers	1756-L6x, 1756-L6xS ⁽¹⁾	1756-L7x, 1756-L7xS	
Weight, approx	14.20 g (0.50 oz)	1.76 g (0.06 oz)

1756 Energy Storage Modules

Instead of a battery, the 1756-L7x and 1756-L7xS controllers are shipped with a 1756-ESMCAP energy storage module (ESM) already installed.

Table 36 - Technical Specifications - 1756 Energy Storage Modules

Attribute	1756-ESMCAP	1756-ESMNSE	1756-ESMNRM
Description	Capacitor energy storage module (removable, ships installed with every controller).	Capacitor energy storage module (removable, no residual WallClockTime power backup). Use this ESM if your application requires that the installed ESM deplete its residual energy to 40 μ J or less before transporting it into or out of your application. Additionally, you can use this ESM with a 1756-L73 (8 MB) or smaller memory-sized controller only. Wait at least 20 minutes for the residual stored energy to decrease to 40 μ J or less before you remove the ESM.	Capacitor energy storage module (nonremovable, secures controller by preventing USB connection and SD card use). If the SD card is installed prior to insertion of the 1756-ESMNRM module, the SD card remains functional, but not removable. This ESM provides your application an enhanced degree of security.
Current draw @ 5.1V DC	330 mA	300 mA	330 mA
North American temperature code	T4A		
IEC temperature code	T4		
Enclosure type rating	None (open-style)

Extreme Temperature Energy Storage Modules

The 1756-L7xXT and the 1756-L7xSXT extreme temperature controllers are shipped with a 1756-ESMCAPXT installed.

Table 39 - Technical Specifications - 1756 Extreme Temperature Energy Storage Modules

Attribute	1756-ESMCAPXT	1756-ESMNSEXT	1756-ESMNRMXT
Description	Capacitor energy storage module extreme temperature (removable, ships installed with every controller).	Capacitor energy storage module extreme temperature (removable, no residual WallClockTime power backup). Use this ESM if your application requires that the installed ESM deplete its residual energy to 40 µJ or less before transporting it into or out of your application. Additionally, you can use this ESM with a 1756-L73 (8 MB) or smaller memory-sized controller only. Wait at least 20 minutes for the residual stored energy to decrease to 40 µJ or less before you remove the ESM.	Capacitor energy storage module extreme temperature (nonremovable, secures controller by preventing USB connection and SD card use). If the SD card is installed prior to insertion of the 1756-ESMNRM module, the SD card remains functional, but not removable. This ESM provides your application an enhanced degree of security.
Current draw @ 5.1V DC	330 mA	300 mA	330 mA
North American temperature code	T4A		
IEC temperature code	T4		
Enclosure type rating	None (open-style)

1756 ControlLogix Batteries

Each ControlLogix controller ships with a battery. The 1756-L6x controllers have nonvolatile memory if you install a 1784-CF128 industrial CompactFlash card. With nonvolatile memory, the controller can be used without a battery. If you do not use a battery, current tag data will remain in the state it was when the nonvolatile memory was saved.

These tables summarize battery life, replacement battery compatibility, and recommendations for use of an externally-mounted battery assembly.

Table 48 - Technical Specifications - 1756 ControlLogix Batteries

Attribute	1756-BA1	1756-BA2	1756-BATM ⁽²⁾	1756-BATA
Description	Lithium battery (0.59 g)	Lithium battery (0.59 g)	Externally-mounted battery assembly	Replacement lithium battery for 1756-BATM (5 g max lithium per each D cell; contains 2 D cells)
ControlLogix controllers	1756-L61, 1756-L62, 1756-L63 controllers, series A	1756-L61, 1756-L62, 1756-L63 controllers, series B 1756-L64, 1756-L65 controllers	1756-L61, 1756-L62, 1756-L63 controllers, series A	1756-BATM battery module
GuardLogix controllers	—	1756-L61S, 1756-L62S, 1756-L63S	—	—
Supported legacy controllers	1756-L55Mx controllers ⁽¹⁾ 1756-L60M03SE controller	—	1756-L55Mx controllers ⁽²⁾ 1756-L60M03SE controller	1756-BATM battery module

(1) The 1756-L55M22, 1756-L55M23, and 1756-L55M24 controllers have nonvolatile memory and can be used without a battery.

(2) The 1756-BATM externally-mounted battery assembly is recommended for use with all 1756-L55x controllers, and is highly recommended for use with all series A 1756-L6x controllers, and provides longer battery life than the 1756-BA1 battery. The 1756-BATM assembly includes one 1756-BATA lithium battery assembly and a 1 m (3.28 ft) cable to connect housing to the controller.

Serial Communication Cables

The 1756-L6x and 1756-L6xS controllers have a built-in serial port.

Table 49 - Technical Specifications - 1756 Serial Cables

Attribute	1756-CP3	1747-CP3
Connector type	Female 9-pin D-shell	
Connector angle	Right angle connector to controller, straight to serial port	
Length	3 m (9.84 ft)	

Important User Information

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (publication [SGI-1.1](#) available from your local Rockwell Automation sales office or online at <http://www.rockwellautomation.com/literature/>) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this publication are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Documentation Feedback

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication [RA-DU002](#), available at <http://www.rockwellautomation.com/literature/>.
